Flexible Termination System (FT-CAP), High Voltage, X7R Dielectric, 500 - 1,000 VDC, VW 80808 Specification

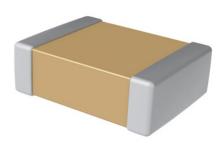

Overview

The KEMET VW80808 Automotive Grade Flexible
Termination (FT-CAP) High Voltage multilayer ceramic
capacitors in X7R dielectric are suited for a variety of
applications requiring proven, reliable performance in
harsh-environment conditions. Whether automotive under
hood or in-cabin, these devices emphasize the vital and
robust nature of capacitors required for mission and safety
of critical automotive subsystems and are compliant with
AEC-Q200 and VW80808 specifications.

These devices use flexible termination technology that inhibits the transfer of board stress to the rigid ceramic body, therefore mitigating flex cracks, which can result in low IR or short circuit failures. Although this technology does not eliminate the potential for mechanical damage that may propagate during extreme environmental and handling conditions, it does provide superior flex performance over standard termination systems. Combined with the stability of an X7R dielectric and designed to accommodate all capacitance requirements, these flex-robust devices are RoHS-compliant, offer up to 5mm of flex-bend capability and exhibit a predictable change in capacitance with respect to time and voltage.

Benefits

- VW 80808 Specification Compliant
- · AEC-Q200 automotive qualified.
- Superior flex performance (5 mm)
- DC voltage ratings of 500V, 630V, & 1KV
- Capacitance offerings ranging from 10 pF to 100 nF
- · Non-polar device, minimizing installation concerns
- · Lead (Pb)-Free, RoHS and REACH compliant

Applications

- Direct Battery/Power Circuits
- Filtering (power plane/bus)
- · High Voltage Heater
- Inverter, DC/DC
- BMS
- · Power Factor Correction

Application Note

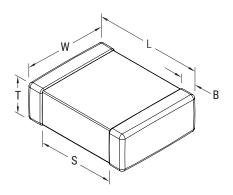

X7R dielectric is not recommended for AC line filtering or pulse applications. These capacitors and/or the assembled circuit board containing these capacitors may require a protective surface coating to prevent external surface arcing.

Ordering Information

| C | 1210 | X | 104 | K | C | R | A | C | 3316 |

Qualification/Certification

This product is VW 80808 Specification Compliant and AEC-Q200 automotive qualified. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at www.aecouncil.com.

Environmental Compliance

Lead (Pb)-free, RoHS, and REACH compliant without exemptions.

Electrical Parameters/Characteristics

| Item | Parameters/Characteristics |
|--|---|
| Operating Temperature Range | -55°C to +125°C |
| Capacitance Change with Reference to +25°C and 0 VDC Applied (TCC) | ±15% |
| ¹ Aging Rate (Maximum % Capacitance Loss/Decade Hour) | 3.0% |
| ² Dielectric Withstanding Voltage (DWV) | 150% of rated voltage for voltage rating of < 1,000 V 120% of rated voltage for voltage rating of ≥ 1,000 V (5 ±1 seconds and charge/discharge not exceeding 50 mA) |
| ³ Dissipation Factor (DF) Maximum Limit at 25°C | 2.5% |
| ⁴ Insulation Resistance (IR) Minimum Limit at 25°C | See Insulation Resistance Limit Table (500 VDC applied for 120 ±5 seconds at 25°C) |

¹ Regarding Aging Rate: Capacitance measurements (including tolerance) are indexed to a referee time of 1,000 hours.

1 kHz \pm 50 Hz and 1.0 \pm 0.2 V_{rms} if capacitance \leq 10 μ F

Note: When measuring capacitance it is important to ensure the set voltage level is held constant. The HP4284 and Agilent E4980 have a feature known as Automatic Level Control (ALC). The ALC feature should be switched to "ON."

Post Environmental Limits

| High | High Temperature Life, Biased Humidity, Moisture Resistance | | | | | | | | | | | |
|---------------|---|-------------|--------------------------------------|----------------------|--------------------------|--|--|--|--|--|--|--|
| EIA Case Size | Rated DC Voltage | Capacitance | Dissipation Factor (Maximum %) | Capacitance Shift | Insulation Resistance | | | | | | | |
| X7R | All | All | 3.0 | ±20% | 10% of Initial Limit | | | | | | | |

²DWV is the voltage a capacitor can withstand (survive) for a short period of time. It exceeds the nominal and continuous working voltage of the capacitor.

³ Capacitance and dissipation factor (DF) measured under the following conditions:

¹²⁰ Hz ±10 Hz and 0.5 ±0.1 V_{rms} if capacitance > 10 μ F

⁴ To obtain IR limit, divide M Ω - μ F value by the capacitance and compare to G Ω limit. Select the lower of the two limits.

Insulation Resistance Limit Table

| EIA Case Size | Rated DC Voltage | 1,000 megohm microfarads or 100 GΩ | 500 megohm microfarads or 10 GΩ | 100 megohm microfarads or 10 GΩ |
|---------------|------------------|---------------------------------------|------------------------------------|------------------------------------|
| 0603 | All | N/A | N/A | All |
| 0805 | All | < 0.0039 µF | N/A | ≥ 0.0039 µF |
| 1206 | All | < 0.012 µF | N/A | ≥ 0.012 µF |
| 1210 | All | < 0.033 µF | N/A | ≥ 0.033 µF |

Density Level A: For low-density product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes. KEMET only recommends wave soldering of EIA 0603, 0805 and 1206 case sizes.

Density Level B: For products with a moderate level of component density. Provides a robust solder attachment condition for reflow solder processes. **Density Level C:** For high component density product applications. Before adapting the minimum land pattern variations the user should perform qualification testing based on the conditions outlined in IPC Standard 7351 (IPC-7351).

Image below based on Density Level B for an EIA 1210 case size.

Soldering Process

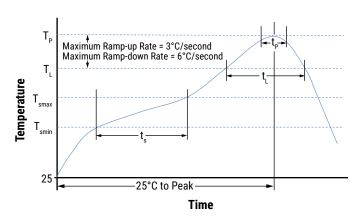

Recommended Soldering Technique:

- Solder wave or solder reflow for EIA case sizes 0603, 0805 and 1206
- · All other EIA case sizes are limited to solder reflow only

Recommended Reflow Soldering Profile:

KEMET's families of surface mount multilayer ceramic capacitors (SMD MLCCs) are compatible with wave (single or dual), convection, IR or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/ J-STD-020 standard for moisture sensitivity testing. These devices can safely withstand a maximum of three reflow passes at these conditions.

| Profile Feature | Termination Flnish | | | | |
|--|-----------------------|--|--|--|--|
| | 100% Matte Sn | | | | |
| Preheat/Soak | | | | | |
| Temperature Minimum (T _{Smin}) | 150°C | | | | |
| Temperature Maximum (T _{Smax}) | 200°C | | | | |
| Time (t_s) from T_{smin} to T_{smax} | 60 - 120 seconds | | | | |
| Ramp-Up Rate $(T_L \text{ to } T_p)$ | 3°C/second maximum | | | | |
| Liquidous Temperature (T_L) | 217°C | | | | |
| Time Above Liquidous (t _L) | 60 - 150 seconds | | | | |
| Peak Temperature (T _P) | 260°C | | | | |
| Time Within 5°C of Maximum Peak Temperature (t _p) | 30 seconds maximum | | | | |
| Ramp-Down Rate (T _p to T _L) | 6°C/second maximum | | | | |
| Time 25°C to Peak | 8 minutes | | | | |
| Temperature | maximum | | | | |

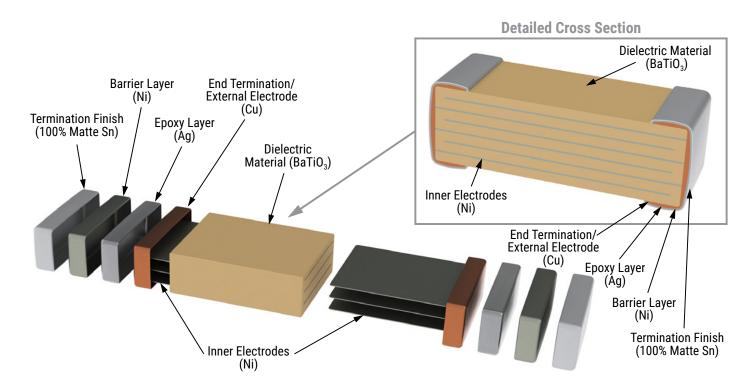

Note: All temperatures refer to the center of the package, measured on the capacitor body surface that is facing up during assembly reflow.

Storage and Handling

Ceramic chip capacitors should be stored in normal working environments. While the chips themselves are quite robust in other environments, solderability will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature – reels may soften or warp and tape peel force may increase. KEMET recommends that maximum storage temperature not exceed 40°C and maximum storage humidity not exceed 70% relative humidity. Temperature fluctuations should be minimized to avoid condensation on the parts and atmospheres should be free of chlorine and sulfur bearing compounds. For optimized solderability chip stock should be used promptly, preferably within 1.5 years of receipt.

Construction

Capacitor Marking (Optional)

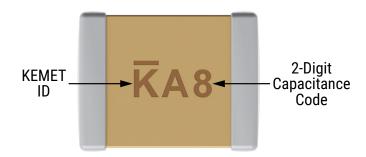

These surface mount multilayer ceramic capacitors are normally supplied unmarked. If required, they can be marked as an extra cost option. Marking is available on most KEMET devices, but must be requested using the correct ordering code identifier(s). If this option is requested, two sides of the ceramic body will be laser marked with a "K" to identify KEMET, followed by two characters (per EIA-198 - see table below) to identify the capacitance value. EIA 0603 case size devices are limited to the "K" character only.

Laser marking option is <u>not</u> available on:

- · COG, ultra stable X8R and Y5V dielectric devices.
- EIA 0402 case size devices.
- EIA 0603 case size devices with flexible termination option.
- KPS commercial and automotive grade stacked devices
- X7R dielectric products in capacitance values outlined below.

| EIA Case Size | Metric Size Code | Capacitance |
|----------------------|-------------------------|-------------|
| 0603 | 1608 | ≤ 170 pF |
| 0805 | 2012 | ≤ 150 pF |
| 1206 | 3216 | ≤ 910 pF |
| 1210 | 3225 | ≤ 2,000 pF |
| 1808 | 4520 | ≤ 3,900 pF |
| 1812 | 4532 | ≤ 6,700 pF |
| 1825 | 4564 | ≤ 0.018 µF |
| 2220 | 5650 | ≤ 0.027 µF |
| 2225 | 5664 | ≤ 0.033 µF |

Marking appears in legible contrast. Illustrated below is an example of an MLCC with laser marking of "KA8", which designates a KEMET device with rated capacitance of 100 μ F. Orientation of marking is vendor optional.

Tape & Reel Packaging Information

KEMET offers multilayer ceramic chip capacitors packaged in 8, 12 and 16 mm tape on 7" and 13" reels in accordance with EIA Standard 481. This packaging system is compatible with all tape-fed automatic pick and place systems. See Table 2 for details on reeling quantities for commercial chips.

^{1.} The embossment hole location shall be measured from the sprocket hole controlling the location of the embossment. Dimensions of embossment location and hole location shall be applied independent of each other.

^{2.} The tape with or without components shall pass around R without damage (see Figure 6).

^{3.} If S, < 1.0 mm, there may not be enough area for cover tape to be properly applied (see EIA Standard 481 paragraph 4.3 section b).

^{4.} B_1 dimension is a reference dimension for tape feeder clearance only.

^{5.} The cavity defined by A_{o} , B_{o} and K_{o} shall surround the component with sufficient clearance that:

⁽a) the component does not protrude above the top surface of the carrier tape.

⁽b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.

⁽c) rotation of the component is limited to 20° maximum for 8 and 12 mm tapes and 10° maximum for 16 mm tapes (see Figure 3).

⁽d) lateral movement of the component is restricted to 0.5 mm maximum for 8 and 12 mm wide tape and to 1.0 mm maximum for 16 mm tape (see Figure 4).

⁽e) for KPS product, A_n and B_n are measured on a plane 0.3 mm above the bottom of the pocket.

⁽f) see addendum in EIA Standard 481 for standards relating to more precise taping requirements.

- 1. The cavity defined by A_{n} , B_{n} and T shall surround the component with sufficient clearance that:
 - a) the component does not protrude beyond either surface of the carrier tape.
 - b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
 - c) rotation of the component is limited to 20° maximum (see Figure 3).
 - d) lateral movement of the component is restricted to 0.5 mm maximum (see Figure 4).
 - e) see addendum in EIA Standard 481 for standards relating to more precise taping requirements.
- 2. The tape with or without components shall pass around R without damage (see Figure 6).

Packaging Information Performance Notes

1. Cover Tape Break Force: 1.0 kg minimum.

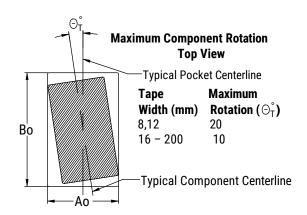

2. Cover Tape Peel Strength: The total peel strength of the cover tape from the carrier tape shall be:

| Tape Width | Peel Strength | | |
|--------------|----------------------------------|--|--|
| 8 mm | 0.1 to 1.0 Newton (10 to 100 gf) | | |
| 12 and 16 mm | 0.1 to 1.3 Newton (10 to 130 gf) | | |

The direction of the pull shall be opposite the direction of the carrier tape travel. The pull angle of the carrier tape shall be 165° to 180° from the plane of the carrier tape. During peeling, the carrier and/or cover tape shall be pulled at a velocity of 300 ±10 mm/minute.

3. Labeling: Bar code labeling (standard or custom) shall be on the side of the reel opposite the sprocket holes. *Refer to EIA Standards 556 and 624*.

Application Guide

Solder Fluxes and Cleaning

The use of water-soluble fluxes provides advantages of excellent solderability due to high activation. However, these fluxes contain organic acids that can induce arcing under high DC or AC voltages. Notable problem areas are underneath the MLCC where flux can be trapped between the ceramic material and PCB. It is therefore critical that PCBs are properly cleaned to remove all flux residue to maintain reliability.

Coating for High Voltage MLCCs

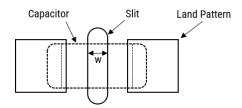

For MLCC ratings ≥1500V, it is recommended to apply a conformal coating to MLCC to prevent surface arcing. To reduce possibility of inducing cracks in the MLCC, select a coating with thermal expansions close to that of the MLCC.

| Dielectric | CTE (ppm/°C) |
|-----------------|--------------|
| Class II BaTiO₃ | 10.7 |
| Class I CaZrO₃ | 9.8 |

Slits in PCB

It is recommended to apply a slit in the PCB under the MLCC to improve washing of flux residue that may get trapped underneath. In some cases, it is not possible to slit entirely through the PCB due to underlying metal planes. It is also acceptable to apply a recessed slit under the MLCC which will also promote cleaning.

- Recommended for case sizes ≥1206
- The width (w) of the slit should be 1mm
- Length of the slit should be as short as possible to prevent damaging the MLCC due to mechanical stress of the PCB.
- Slits also reduce the risk of solder balls under MLCC which decreased the creepage distance.

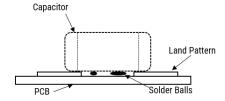

Solder Resist

If a slit cannot be applied as above, it is recommended to not use solder resist directly under the MLCC. The use of solder resist material reduces the distance between MLCC ceramic material and PCB thus making it difficult to clean.

Solder Balls

Improper reflow techniques and/or improper washing can induce solder balls under or adjacent to the MLCC. Solder balls reduce the creepage distance between the MLCC terminations and increase the risk of arcing or damage to the ceramic material. To reduce the risk of solder balls:

- Follow KEMET's solder recommendations as outlined in the datasheet.
- If performing a cleaning procedure, properly clean the PCB per KEMET's cleaning recommendations.
- Add slit to the PCB as shown above.

Disclaimer

YAGEO Corporation and its affiliates do not recommend the use of commercial or automotive grade products for high reliability applications or manned space flight.

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
