

KPS HV, Large Case, SM Series, X7R Dielectric, 500 – 10,000 VDC (Industrial Grade)

Overview

KPS HV (KEMET Power Solutions, High Voltage), Large Case (≥ 1515), SM Series capacitors in X7R dielectric are designed to meet robust performance standards required in higher reliability industrial applications. Utilizing lead-frame technology, SM Series devices isolate the multilayer ceramic chip component from the printed circuit board providing advanced mechanical and thermal stress performance. Isolation of the chip component also addresses concerns for audible, microphonic noise that may occur when a bias voltage is applied. Although this technology does not eliminate the potential for mechanical damage that may propagate during extreme environmental and handling conditions, it does demonstrate superior performance over non-isolating systems. Available in both formed "L" and "J" lead configurations, SM Series devices offer up to

10 mm of board flex capability and exhibit lower ESR, ESL and higher current discharge capability when compared to other dielectric solutions.

Combined with the stability of an X7R dielectric, KEMET's High Voltage SM Series devices exhibit a predictable change in capacitance with respect to time and voltage and boast a minimal change in capacitance with reference to ambient temperature. Capacitance change is limited to $\pm 15\%$ from -55°C to $+125^{\circ}\text{C}$.

KEMET's Industrial grade products offer additional screening options for higher reliability applications. Both Group A and Group B testing/inspection options per MIL-PRF-49467 are available for the SM Series.

Benefits

- -55°C to $+125^{\circ}\text{C}$ operating temperature range
- Large Case Sizes (≥ 1515)
- Formed "L" or "J" leadframe configurations
- Group A and B screening per MIL-PRF-49467 available
- Reliable and robust leadframe termination system
- DC voltage ratings of 500 V, 1 KV, 2 KV, 3 KV, 4 KV, 5 KV, 7.5 KV, and 10 KV
- Capacitance offerings ranging from 180 pF up to 4.7 μF

Ordering Information

SM20		B	153	K	501	B	M
Style/Size		Dielectric	Capacitance Code (pF)	Capacitance Tolerance	Rated Voltage (VDC)	Lead Configuration ¹	Testing/ Inspection Option ²

Benefits cont.

- Advanced protection against thermal and mechanical stress
- Provides up to 10 mm of board flex capability
- Reduces audible, microphonic noise
- Low ESR and ESL
- Non-polar device, minimizing installation concerns
- Silver plated copper alloy leadframe termination system

Applications

- Charging stations
- LCD fluorescent backlight ballasts
- Voltage multiplier circuits
- DC/DC converters
- Power supply
- LAN/WAN interface
- High voltage decoupling
- Filters
- DC blocking
- ESD Protection
- Low ESR and ESL
- Non-polar device, minimizing installation concerns
- Silver plated copper alloy leadframe termination system

Application Notes

X7R dielectric is not recommended for AC line filtering or pulse applications. These capacitors and/or the assembled circuit board containing these capacitors may require a protective surface coating to prevent external surface arcing.

Qualification/Certification

Industrial Grade products are subject to internal qualification. Details regarding test methods and conditions are referenced in Table 3, Performance & Reliability.

Environmental Compliance

RoHS Compliant with Exemption(s).

Soldering Process

The capacitors and assemblies outlined in this specification sheet are susceptible to thermal shock damage due to their large ceramic mass. Temperature profiles used should provide adequate temperature rise and cool-down time to prevent damage from thermal shock. In general, KEMET recommends against hand soldering for these types of large ceramic devices.

Recommended Soldering Technique:

- Solder reflow only

Preheating and Reflow Profile Notes:

Due to differences in the coefficient of thermal expansion for the different materials of construction, it is critical to monitor and control the heating and cooling rates during the soldering process. During the reflow soldering process, the maximum recommended heating and cooling rate (dT/dt) is 4°C/second. To ensure optimal component reliability, KEMET's recommended heating and cooling rate is 2°C/second. After soldering, the capacitors should be air cooled to room temperature before further processing. Forced air cooling is not recommended.

Recommended Reflow Soldering Profile:

Profile Feature	SnPb Assembly
Preheat/Soak	
Temperature Minimum (T_{smin})	100°C
Temperature Maximum (T_{smax})	150°C
Time (t_s) from T_{smin} to T_{smax}	60 – 90 seconds
Ramp-up Rate (T_L to T_p)	2°C/seconds
Liquidous Temperature (T_L)	183°C
Time Above Liquidous (t_L)	95 seconds
Peak Temperature (T_p)	240°C
Time within 5°C of Maximum Peak Temperature (t_p)	5 seconds
Ramp-down Rate (T_p to T_L)	2°C/seconds
Time 25°C to Peak Temperature	3.5 minutes

Note 1: All temperatures refer to the center of the package, measured on the package body surface that is facing up during assembly reflow.

Table 3 – Performance & Reliability: Test Methods and Conditions

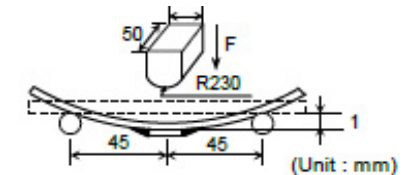

TEST	REFERENCE	Test Condition	LIMITS										
Visual & Mechanical	KEMET Internal	No defects that may affect performance (10X)	Dimensions according KEMET Spec Sheet										
Capacitance (Cap)	KEMET Internal	$C \leq 10\mu\text{F}$ 1 kHz ± 50 Hz and 1.0 ± 0.2 Vrms or 0.5 ± 0.2 Vrms* * See part number specification sheet for voltage Capacitance measurements (including tolerance) are indexed to a referee time of 48 or 1,000 hours Please refer to a part number specification sheet for referee time details	Within Tolerance										
Dissipation Factor (DF)	KEMET Internal	$C \leq 10\mu\text{F}$ Frequency: 1 kHz ± 50 Hz Voltage*: 1.0 ± 0.2 Vrms, 0.5 ± 0.2 Vrms, * See part number specification sheet for voltage	Within Specification Dissipation factor (DF) maximum limit at 25°C = 2.5%										
Insulation Resistance (IR)	KEMET Internal	500VDC applied for 120 \pm 5 seconds at 25°C	Within Specification To obtain IR limit, divide M Ω - μF value by the capacitance and compare to G Ω limit. Select the lower of the two limits: 1,000 megohm microfarads or 100 G Ω .										
Temperature Coefficient of Capacitance (TCC)	KEMET Internal	$C \leq 10\mu\text{F}$ Frequency: 1 kHz ± 50 Hz Voltage*: 1.0 ± 0.2 Vrms, 0.5 ± 0.2 Vrms, 0.2 ± 0.1 Vrms * See part number specification sheet for voltage <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Step</th> <th>Temperature (°C)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>+25°C</td> </tr> <tr> <td>2</td> <td>-55°C</td> </tr> <tr> <td>3</td> <td>+25°C (Reference Temperature)</td> </tr> <tr> <td>4</td> <td>+125°C</td> </tr> </tbody> </table>	Step	Temperature (°C)	1	+25°C	2	-55°C	3	+25°C (Reference Temperature)	4	+125°C	Capacitance $\pm 15\%$ over -55°C to +125°C
Step	Temperature (°C)												
1	+25°C												
2	-55°C												
3	+25°C (Reference Temperature)												
4	+125°C												
Dielectric Withstanding Voltage (DWV)	KEMET Internal	150% of rated voltage for voltage rating of $\leq 1,250$ VDC 120% of rated voltage for voltage rating of $> 1,250$ VDC (5 \pm 1 seconds and charge/discharge not exceeding 50 mA)	Withstand test voltage without insulation breakdown or damage.										
Aging Rate (Maximum % Capacitance Loss/Decade Hour)	KEMET Internal	Capacitance measurements (including tolerance) are indexed to a referee time of 48 or 1,000 hours. Please refer to a part number specific datasheet for referee time details.	Please refer to a part number specification sheet for specific Aging rate										
Terminal Strength	KEMET Internal	Conditions A (2.3 kg or 5 lbs).	No evidence of mechanical damage										
Board Flex	AEC-Q200-005	Standard Termination system 2.0 mm Flexible Termination System 3.0 mm Test time: 60 \pm 5sec Ramp time: 1 mm / sec 	No evidence of mechanical damage										
Solderability	J-STD-002	Condition: 4 hours \pm 15 minutes at 155°C dry bake apply all methods Test 245 \pm 5°C (SnPb & Pb-Free)	Visual Inspection. 95% coverage on termination. No leaching										

Table 3 – Performance & Reliability: Test Methods and Conditions cont.

Temperature Cycling	JESD22 Method JA-104	1,000 cycles (-55°C to +125°C) 2-3 cycles per hour Soak Time 1 or 5 min	Measurement at 24 hours ±4 hours after test conclusion. Cap: ±20% shift DF: Initial Limit IR: Initial Limit
Biased Humidity	MIL-STD-202 Method 103	Load Humidity: 1,000 hours 85°C / 85% RH and 200 VDC maximum	Measurement at 24 hours ±4 hours after test conclusion. Within Post Environmental Limits Cap: ±20% shift IR: 10% of Initial Limit DF Limit Maximum: 3.0%
		Low Volt Humidity: 1,000 hours 85°C / 85% RH and 1.5 V.	
Moisture Resistance	MIL-STD-202 Method 106	Number of cycles required 10, 24 hours per cycle. Steps 7a and 7b not required	Measurement at 24 hours ±4 hours after test conclusion. Within Post Environmental Limits Cap: ±20% shift IR: 10% of Initial Limit DF Limit Maximum: 3.0%
Thermal Shock	MIL-STD-202 Method 107	Number of cycles required 5, (-55°C to 125°C) Dwell time 15 minutes.	Cap: ±20% shift DF: Initial Limit IR: Initial Limit
High Temperature Life	MIL-STD-202 Method 108	1,000 hours at 125°C with rated voltage applied.	Within Post Environmental Limits Cap: ±20% shift IR: 10% of Initial Limit DF Limit Maximum: 3.0%
Vibration	MIL-STD-202 Method 204	5 g's for 20 minutes, 12 cycles each of 3 orientations. Test from 10 – 2,000 Hz	Cap: ±20% shift DF: Initial Limit IR: Initial Limit
Mechanical Shock	MIL-STD-202 Method 213	1500g's 0.5ms Half-sine, Velocity Change 15.4 ft/sec (Condition F)	Cap: ±20% shift DF: Initial Limit IR: Initial Limit
Resistance to Soldering Heat	MIL-STD-202 Method 210	Condition K, time above 217°C, 60s – 150s	Cap: ±0.3% or ±0.25 pF shift DF: Initial Limit IR: Initial Limit

Storage and Handling

Ceramic chip capacitors should be stored in normal working environments. While the chips themselves are quite robust in other environments, solderability will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature—reels may soften or warp and tape peel force may increase. KEMET recommends that maximum storage temperature not exceed 40°C and maximum storage humidity not exceed 70% relative humidity. Temperature fluctuations should be minimized to avoid condensation on the parts and atmospheres should be free of chlorine and sulfur bearing compounds. For optimized solderability chip stock should be used promptly, preferably within 1.5 years of receipt.

Construction

Product Marking

Product marking is an extra-cost option. These devices will be supplied unmarked unless otherwise specified and/or requested. For more detailed information regarding marked product and how to request this option, please contact KEMET.

Disclaimer

YAGEO Corporation and its affiliates do not recommend the use of commercial or automotive grade products for high reliability applications or manned space flight.

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
